Use the grid below to indicate the location of each electrical outlet ordered. If power is only required at the rear of an in-line booth this form is not necessary.

Indicate booth type: Island ☐ Peninsula ☐ In-line ☐
(Provide aisle or adjacent booth #s for orientation)

Power is brought to one location in island booths and then distributed from that point. Indicate this location and all other outlet locations using the legend below:

X = Main Distribution Point ● = Other outlet locations (Indicate power requirement next to symbol)

Indicate the layout scale and total square footage. Example: 1 Square = 1 Foot

_____ Square = _____ Ft / Total Square Footage = _____

Sample Layouts

Island Booth: Electrical layouts are required for all island booths.

Standard Location:

There is no such thing as a standard location in an island booth. There will be labor and material required to install the outlet ordered. If a layout is not provided, we will place power at our discretion.

What should be on a completed floor plan:

1. Main drop or outlet location. Island booths do not have a back wall so the main location operates as the point which all other power will be distributed from. There can often be many cords or cables in this location so it is often best to be in a closet, under a table or a location out of site.
2. Location of all other outlets. This includes the dimensions where the outlets will be placed. Without dimensions, outlets are likely to end up in the wrong locations in the booth.
3. Power requirements in each location. This can be 500 Watts / 1000 Watts / 2000 Watts or even 10 Amp 208 volt 3 Phase
4. Booth Orientation. This is especially useful for island booths. It helps us understand which side is which in the booth.

Completed Layout:

Inline or Peninsula Booths:

Layouts are only required when outlets are needed at any other location than the back of the booth.
